

AT FIRST

- Thanks for your order!
- Check the parcel received.
- Observe how the panels are connected one to the other and how they are placed in the room. To help you put up the wallpaper, the panels have numbers (the n° 1 will be the first from left when you are looking at the wall).

NEEDED TOOLS

- Non woven wallpaper paste
- A cutter with a new blade
- A stiff brush or a clean and dry cloth
- A sponge & a bucket of water
- A pasting roll and/or a brush
- A carpenter's level or a plumb line and a pencil
- A roll of protection tape

1. PREPARATION

WHITE & CLEAN WALL

To put up a wallpaper you need a white, flat, dry and clean wall. If your wall was upholstered, take off the old wallpaper, rub and wash the wall. Apply a primer paint. If your wall was painted with gloss paint, rub and wash it and apply a primer paint. Take off all switches, electrical outlet etc. before beginning the installation.

PROTECTION

Protect the zone where you will hang the wallpaper with protection tape.

2. REFERENCE LINES

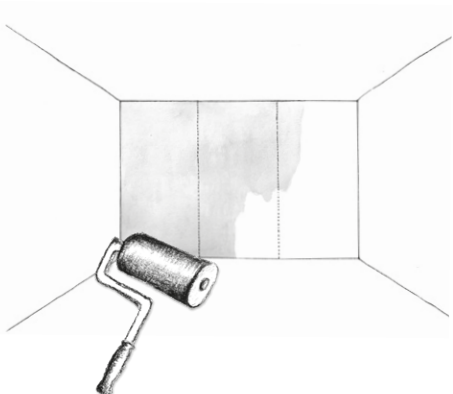

Draw a vertical line from the left corner of the wall, equal to the width of the first panel; use a carpenter's level or a plumb line to help you.

This mark will help you put up correctly you panel because often the corners and walls are not really straight!

This will need to be done for each panel.

3. PASTING

Using the pasting brush or roll, apply generously the paste on the zone where you will put your panel.

For a perfect finish paste a bit larger than the zone.

Unlike the classic wallpapers, you just need to put paste on the wall which helps manipulating the panels with precision.

4. PUTTING UP THE PANEL

Unroll the panel from the ceiling to the floor. If you are not sure that the ceiling is completely straight, keep 2-3 extra cms of pattern on top.

Flatten from the top with a brush or a clean cloth from the center to the sides in order to drive out the air and the extra paste.

Don't panic if some paste comes out from the panel or splash on it, you just need to clean it gently with a really clean and lightly humid sponge.

For the next panels just repeat these steps, be careful on how you connect the pattern.

Our paper doesn't move when the paste dries: you need to paste each panel side to side without leaving any margin or overlap.

If you make a mistake, you can remove and put up again the panels while the paste isn't completely dried.

5. CUTTING

Only after the paste is completely dry, cut what's left of paper on top, bottom & sides. Use a sharp and clean cutter blade, take a new one if necessary.

BRAVO,
YOU HAVE PUT UP YOUR DECOR,
SEND US A PICTURE!
